Instructions for use
X-MKK-DIS001 “Mitty Therapy”
Therapy mitt with polystyrene beads

CE

Intended user:
This medical device is intended to be used by healthcare professionals.

Intended purpose:
A mitt provides a polstered cover around the hand and fingers to prevent self injury and to prevent the interruption of medical treatment.

Indications for use:
- Patients assessed to be at risk of disrupting life-saving treatments (e.g, tube pulling).
- Patients assessed to be at risk of line pulling, which may prevent monitoring of vital signs.
- Patients whose picking, pulling, scratching, or peeling exacerbates a skin condition, causes selfinjury, or compromises wound site integrity.

Contraindications:
- DO NOT use on a patient who is or becomes highly aggressive, combative, agitated, or suicidal.
- NEVER use mitts on a patient:
  - o If an IV or wound site could be compromised by the device
  - o With a dislocation or fracture on the affected limb.

REF X-MKK-DIS001

Composition:
29% cotton, 71% polyester

NON STERILE Non-sterile

Do not use if package is damaged

Potential complications:

Severe emotional, psychological, or physical problems may occur: if the applied device is uncomfortable; or if it severely limits movement. If symptoms of these problems ever appear for any reason, get help from a qualified medical authority and find a less restrictive, product or intervention.

Product description:

Packaging:

The product is packed per pair in a transparent bag.

Storage and handling:

- This device is designed for use in indoor environments.
- This device may be stored in ambient warehouse temperatures at normal humidity levels. Avoid excess moisture or high humidity that may damage product materials.

Operating instructions:

Before applying:

- Make a complete assessment of the patient to ensure restraint use is appropriate.
- Identify the patient's symptoms and, if possible, remove the cause. You may need to: cater to individual needs and routines; increase rehabilitation and restorative nursing; modify the environment; or increase supervision.
- Use a restraint only when all other options have failed. Use the least restrictive device, for the shortest time, until you find a less restrictive alternative. Patients have the right to be free from restraint.
- If possible, obtain informed consent from the patient or guardian prior to use. Explain the reason for restraint use to the patient and/or guardian to help ensure cooperation.
- A restraint must only be used in accord with the patient's Individualized Care Plan (ICP). The ICP is an assessment by an interdisciplinary team, which may include, but is not limited to: PT, OT, Nursing, the Physician, and Social Services. The ICP should include: restorative nursing; patient release; and pressure sore prevention.

Application instructions (repeat steps 1-3 for each mitt):

1. Choose the correct mitt (left or right).
2. Open the velcro and insert the patient's hand.
3. Make sure the palm of the hand rests on the polystyrene beads.
4. Wrap the wrist strap around the smallest part of the patient's wrist, through the plastic ring, and secure it by attaching the Velcro strap.
5. Slide ONE finger (flat) between the device and the inside of the patient's wrist to ensure proper fit. The strap must be snug, but not compromise circulation.

Monitor per facility policy. Check to ensure that:

- Mitts are properly secured. If applied too tightly, circulation will be restricted; if applied too loosely, the patient may be able to slip his or her limb from the device;
- Mitts are intact, not torn or damaged, and hook and loop closes securely. DO NOT allow patients to ingest mitt material;
- The patient cannot use his or her teeth or otherwise remove the device and inflict self-injury;
- Monitor closely when the patient is out of bed. Patients who ambulate while wearing this device may be at risk of injury from a fall.

Disposable:

This is a disposable product. Properly dispose of the product per facility's policy for BIOHAZARDOUS materials. Reuse of this product could cause cross-contamination or product malfunctions. Human Protection B.V. cannot be held liable for the risks that come from re-using disposable items.

NOTE! Just as patient behavior is not 100% predictable, no product is 100% foolproof. Patient afety requires regular reassessment and monitoring per facility policy. A product that worked in the past may be inappropriate if the patient's mental or physical health status changes. NEVER apply any product that you feel is unsafe. Consult with the proper medical authority if you have questions about patient safety.

Additional warnings:

1. Improper application or use of any restraint may result in serious injury or death.
2. ALWAYS monitor patient per facility policy.
3. Be aware that constant monitoring may be required for:
    - o Aggressive or agitated patients; and patients deemed at risk of aspirating their vomit. This includes patients in the supine position, or who are not able to sit up. If the patient vomits, he or she could aspirate the vomit and suffocate.
    - o Be prepared to intervene at the first sign of danger. Such patients require frequent review and evaluation of their physical and psychological status.
4. NEVER alter or repair this product. ALWAYS Inspect before each use: Check for broken stitches or parts; torn, cut or frayed material or locks, buckles, or hook and loop fasteners that do not hold securely. DO NOT use soiled or damaged products. Doing so may result in serious injury or death. Dispose of damaged products per facility policy for BIOHAZARDOUS material.

5. NEVER use restraining products on toilets, or on any chair or furniture that does not allow proper application as directed in the application instructions. DO NOT use at home.
6. NEVER expose this product to open flame, fire, smoking materials, or high heat sources. Some products may melt or ignite and burn. The facility smoking/no smoking policy should be strictly enforced.
7. ALWAYS report severe incidents to Human Protection B.V., the distributor and to the responsible local authorities.
